Art Unit: 1631

The references crossed out on forms PTO-1449 have not been considered because copies of those references are not in the file nor are copies in any of the parent files.

The disclosure is objected to because of the following informalities.

- (a) The status of each of the parent applications on page 1 of the specification should be updated.
- (b) The Description of the Drawings must include a mention of each of Figures 11a and 11b rather than just Figure 11.

Appropriate correction is required.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 33 and 36 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claims are vague, indefinite, and incomplete.

- (a) The recitation of "the expression level of which is not expected to be altered in a diseased cell" (claim 33) is vague, indefinite, and incomplete because it is not clear by whom or on what criteria the expectation is based.
- (b) The recitation of "the expression level of which is expected to be altered in a disease cell" (claim 33) is vague, indefinite, and incomplete because it is not clear by whom or on what criteria the expectation is based.
- (c) The recitation of "the expression of which is expected to be different in a diseased cell" (claim 36) is vague, indefinite, and incomplete because it is not clear by whom or on what criteria the expectation is based.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982);

*In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 33-36 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 7-9 of U.S. Patent No. 6,114,114. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 7-9 of U.S. Patent No. 6,114,114 embrace the methods of claims 33, 34, and 36. In addition, it would be obvious to one of ordinary skill in the art to notice that the genes that are differentially expressed in the disease state (*e.g.*, see claim 7 of U.S. Patent No. 6,114,114) are identified as being associated with the disease as is claimed in claim 35 of the instant application.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 34 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Martinell et al (Proc. Natl. Acad. Sci. USA 78 (8), 5056 (1981)). The measurements of mRNA levels of both  $\alpha$ - and  $\beta$ -globins in normal and thalassemic mice in Martinell et al describes the claimed invention (*e.g.*, see Figures 2 and 3, Table 2, and the Discussion section).
